INTRODUCTION

The need to overcome challenges of sustainable energy supply leads to more search on alternative sources, and renewable energy production. The prospects for renewable energy to intervene and help the global energy mix is essential, and require more commitment and advancement of modern technologies, and energy efficient approach and financing framework to actualize the goal.

Recent observation guides the thought that not all renewable energy resources are sustainable. Biomass-wood, for instance, is renewable but not sustainable. Furthermore, renewable energy resources can be non-sustainable if they are exploited at a high rate not to be able to be regenerated. In this sense, sustainable energy should meet today's demand, and the future needs for energy.
