A SEMINAR ON BRAND AWARENESS AND TECHNIQUES :

Brand awareness is a marketing term that describes the degree of consumer recognition of a product by its name. Creating brand awareness is a key step in promoting a new product or reviving an older brand. Ideally, awareness of the brand may include the qualities that distinguish the product from its competition.

Brand awareness is the extent to which customers are able to recall or recognize a brand under different conditions Brand awareness is one of two dimensions from brand knowledge, an associative network memory model. Brand awareness is a key consideration in consumer behavior, advertising management, and brand management. The consumer's ability to recognize or recall a brand is central to purchasing decision-making. Purchasing cannot proceed unless a consumer is first aware of a product category and a brand within that category.

Awareness does not necessarily mean that the consumer must be able to recall a specific brand name, but they must be able to recall enough distinguishing features for purchasing to proceed. Creating brand awareness is the main step in advertising a new product or bringing back the older brand in light.

BRAND TECHNIQUES :

Brand awareness consists of two components: brand recall and brand recognition. Several studies have shown that these two components operate in fundamentally different ways as brand recall is associated with memory retrieval, and brand recognition involves object recognition. Consumers are believed to hold between three and seven brands in their consideration set across a broad range of product categories.
