Sub: Seeking Permission to conduct work shop on “MAT LAB” .

Sir,

I request you to kindly grant permission to conduct a work shop in the computer lab -2 on 19th & 20th APRIL 2019 on “MAT LAB” with regard to the new trends in MAT LAB . This will be a very informative work shop for many students.

Our students really need to understand the Applications and advantages of MAT LAB .

Thanking you Sir

Yours Sincerely

Date : 19th April 2019 & 20th April 2019

Venue: computer lab, Department of Electrical & Electronics Engineering, RKCE

Coordinators : Mr .B.KANAKA RAO
Mr. B. VEERA BABU

Organized by: Electrical & Electronics engineering

Total Participants attended: 100

Details of Participants: Students of 2,3 & 4th Year 2nd semester

Students of 2,3 & 4th Year 2nd semester EEE students are attended the Work shop on Matlab with full enthusiasm. Dr. P.V.R.L.NARASIMHAM has elaborately explained about the process and advantages of Matlab. Also, he has explained about the various types and applications of Matlab. The detailed topics are showed in program flow. The Work shop was very useful as well as effective for the participants.

Dr. P. V. R. L. Narasimham, Professor & HOD

Presently Working as Professor & HOD of Electrical & Electronics Engineering Department at VR Siddhartha from APRIL 2011 (Responsibilities: Teaching UG and PG Students of Electrical & Electronics Engineering and performing the works assigned by Principal). Having 29 years of Teaching experience.

What is Conservation?

Conservation is a deliberate planned guarding and protecting of something felt as precious. Synonyms: Preservation, Salvation, Saving. Here the precious item is Energy and so there is a need to discuss about Energy Conservation and also about Energy Efficiency Limited fuels are available on earth. Demand for energy is increasing day-by-day. It is possible that someday most of fossil fuels will be exhausted. So, there is a need to conserve energy and also switch over to alternate energy sources.

Need for Energy Conservation

Energy is the legacy of the Almighty, gifted to all species of the Earth by nature. This legacy, shared for several millions of years in harmony by all species, was passed on for hundreds of generations and meant to be passed on to future generations. It is their right. But the last 3 generations (100 years) have seen human species consumption surpassing all the previous millions of years consumption. This dangerous trend needs to be arrested and

MATLAB System

MATLAB language This is a high-level matrix/array language with control flow statements, functions, data structures, input/output, and object-oriented programming features. It allows both "programming in the small" to rapidly create quick and dirty throw-away programs, and "programming in the large" to create complete large and complex application programs.

MATLAB working environment This is the set of tools and facilities that you work with as the MATLAB user or programmer. It includes facilities for managing the variables in your workspace and importing and exporting data. It also includes tools for developing, managing, debugging, and profiling M- files.

MATLAB's applications, Handle Graphics This is the MATLAB graphics system. It includes high level commands for two-dimensional and three dimensional data visualization, image processing, animation, and presentation graphics. It also includes low-level commands that allow you to fully customize the Appearance of graphics as well as to build complete Graphical User Interfaces on your MATLAB applications.

MATLAB Application Program Interface (API) This is a library that allows you to write C and Fortran programs that interact with MATLAB. It include facilities for calling routines from MATLAB (dynamic linking), calling MATLAB as a computational.

Start of MATLAB:-

Mac: Double-click on the icon for MATLAB.

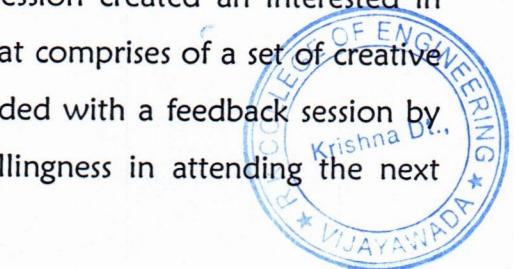

PC: Choose the submenu "Programs" from the "Start" menu. From the "Programs" menu, open the "MATLAB" submenu. From the "MATLAB" submenu, choose "MATLAB".

In the afternoon session, students were given hands on training in solving problems at EEE Simulation Lab. The entire session was very interactive and the students have been demonstrated with various programs related to circuit analysis. The tutorial session created an interested in learning this software and they have been given an assignment that comprises of a set of creative questions for continuous learning process. The workshop was ended with a feedback session by the students In that they have expressed their interest and willingness in attending the next workshop of this series.

REPORT ON MATLAB WORK SHOP

Introduction to MAT LAB is a high-performance language for technical computing. It integrates computation, visualization, and programming in an easy-to-use environment where problems and solutions are expressed in familiar mathematical notation.

Typical uses include:

- Math and computation

- Algorithm development
 - Modeling, simulation, and prototyping
 - Data analysis, exploration, and visualization
 - Scientific and engineering graphics
 - Application development, including Graphical User Interface building
- MATLAB is an interactive system whose basic data element is an array that does not require dimensioning. This allows you to solve many technical computing problems, especially those with matrix and vector formulations, in a fraction of the time it would take to write a program in a scalar non interactive language such as C or FORTRAN. The name MATLAB stands for matrix laboratory. MATLAB was originally written to provide easy access to matrix software developed by the LINPACK and EISPACK projects, which together represent the state-of-the-art in software for matrix computation.

MATLAB has evolved over a period of years with input from many users. In university environments, it is the standard instructional tool for introductory and advanced courses in mathematics, engineering, and science. In industry, MATLAB is the tool of choice for high-

productivity research, development, and analysis. MATLAB features a family of application-specific solutions called toolboxes. Very important to most users of MATLAB, toolboxes allow you to learn and apply specialized technology. Toolboxes are comprehensive collections of MATLAB functions (M-files) that extend the MATLAB environment to solve particular classes of problems. Areas in which toolboxes are available include signal processing, control systems, neural networks, fuzzy logic, wavelets, simulation, and many others. MATLAB is a fourth-generation programming language and numerical analysis environment. Uses for MATLAB include matrix calculations, developing and running algorithms, creating user interfaces (UI) and data visualization. The multi-paradigm numerical computing environment allows developers to interface with programs developed in different languages. MATLAB is used by engineers and scientists in many fields such as image and signal processing, communications, control systems for industry, smart grid design, robotics as well as computational finance.
