Sub: Seeking permission to conduct seminar on "INTERNET OF THINGS" -reg.

Sir,

I am writing this letter to request permission to conduct a seminar in the S4 on 18<sup>th</sup> & 19<sup>th</sup> JULY 2018. I wish to conduct a seminar on "INTERNET OF THINGS" in regards to the new trends in Embedded systems and Robotics. I believe this will be a very informative seminar that many students will wish to attend.

Our students to grab jobs in market, and they really need to understand the process and advantages of INTERNET OF THINGS as an alternative manufacturing technique. I believe small steps must be taken to educate everyone on the seriousness of this concept and this is good road map for them.

Thanking you sir,

Yours Sincerely,

### INTERNET OF THINGS:

Internet of Things (IoT) is a new revolution of the Internet. Internet of Things (IoT) is can be said the expansion of internet services. It provides a platform for communication between objects where objects can organize and manage themselves. It makes objects themselves recognizable. The internet of things allows everyone to be connected anytime and anywhere. Objects can be communicated between each other by using radio frequency identification (RFID), wireless sensor network (WSN), Zigbee, etc. Radio Frequency identification assigns a unique identification to the objects. RFID technology is used as more secure identification and for tracking/locating objects, things, vehicle.

## Why INTERNET OF THINGS?

The Internet of Things (IoT) is the network of physical objects, devices, vehicles, buildings and other items which are embedded with electronics, software, sensors, and network connectivity, which enables these objects to collect and exchange data.

The Internet of Things allows objects to be sensed and controlled remotely across existing network infrastructure, creating opportunities for more-direct integration between the physical world and computer-based systems, and resulting in improved efficiency, accuracy and economic benefit; when IoT is augmented with sensors and actuators, the technology becomes an instance of the more general class of cyber-physical systems, which also encompasses technologies such as smart grids, smart homes, intelligent transportation and smart cities. Each thing is uniquely identifiable through its embedded computing system but is able to interoperate within the existing Internet infrastructure. Experts estimate that the IoT will consist of almost 50 billion objects by 2020.
